SUMMARY

Frontend Developer with 3+ years of experience building scalable, secure, and high-performance web applications for enterprise SaaS and U.S.-based clients. Expert in React.js, Next.js, TypeScript, Redux Toolkit, React Query (TanStack Query), and Tailwind CSS. Proven record delivering complex, data-heavy products including a full-scale enterprise HRMS (onboarding, offboarding, performance management, and reporting), with strong skills in REST API integration, server-state management, real-time systems (WebRTC), performance optimization, and accessibility (WCAG).

EXPERIENCE

NSP Global Tech

Jan 2026 – Present

Frontend Developer

Bengaluru, Karnataka

- Architecting the frontend of **Assisto**, an enterprise HRMS, using React.js, TypeScript, Redux Toolkit, React Query, and Tailwind CSS; built a library of 30+ reusable, accessible components that cut feature-delivery time by ~25%.
- Onboarding:** Delivered a candidate self-service portal with a multi-step stepper UI, drag-and-drop / mobile-camera document upload, OCR data review (approve / reject / re-upload), and offer-letter preview with an e-signature flow.
- Offboarding:** Built resignation and termination workflows, manager approval dashboards, and a Knowledge Transfer (KT) module with multi-receiver assignment, status transitions, and a full audit trail.
- Performance Management (PMS):** Engineered goal-setting, self / manager assessment, and interactive 9-box matrices (Business vs. Behaviour, Performance vs. Potential) with level-based (L1–L5) weightage configuration.
- Reports:** Built a reporting module with dynamic column selection, mandatory / optional filters, an advanced cross-module query builder, and async report-status handling via React Query (caching, pagination, polling).
- Implemented role-based access control (RBAC) and permission-driven UI across HR, Manager, and Employee roles; built complex multi-step forms with React Hook Form and schema validation; optimized via code splitting, lazy loading, and memoization, reducing initial load time by ~40%.

Techshed Technologies

Nov 2022 – Dec 2025

Frontend Developer

Pune, Maharashtra

- Developed and maintained enterprise-grade React.js, Next.js, and TypeScript applications using a reusable, component-based architecture and micro-frontend patterns.
- Implemented Redux Toolkit and Context API for predictable, scalable state management; integrated REST APIs (Java Spring Boot, Node.js) with JWT authentication and robust error handling.
- Built real-time, event-driven features using WebRTC, STOMP.js, WebSockets, and polling for live dashboards and notifications.
- Optimized application performance via lazy loading, code splitting, memoization, and Virtual DOM tuning; debugged and profiled with browser DevTools, improving load and render times.
- Converted Figma and Adobe XD designs into pixel-perfect, responsive, WCAG-accessible interfaces with cross-browser compatibility.
- Wrote unit tests with Jest and performed UI validation; collaborated with QA, UX, and product owners in Agile/Scrum (team of 8) using Git, GitHub, Jira, and Postman.

PROJECTS

Video KYC Platform | *React.js, Redux Toolkit, WebRTC, STOMP.js, Spring Boot, PostgreSQL, STUN/TURN*

- Developed a real-time video KYC platform with WebRTC and STUN/TURN servers for secure, low-latency peer-to-peer video communication.
- Built role-based dashboards (Admin, Agent, Auditor) supporting live and scheduled KYC sessions, case assignment, and audit tracking.
- Integrated OCR-based document verification and STOMP.js + polling notifications for real-time session and status updates.
- Architected modular components with efficient state management and performance tuning to support high-concurrency live sessions.

Liveliness Verification System | *React.js, Spring Boot, Flask, OpenCV, Librosa*

- Built a multi-factor e-KYC system using facial landmark detection, voice-based OTP, and geolocation verification.

- Integrated the React frontend with Spring Boot and Flask (OpenCV, Librosa) microservices for secure biometric workflows.
- Implemented anti-spoofing mechanisms, retry logic, and robust error handling; deployed on Ubuntu with a secure, scalable microservice architecture.

CareerSphere – Job-Search Platform | *React.js, React Router, REST APIs*

- Developed the complete React frontend for a job-search and career-coaching SaaS with client and admin dashboards.
- Implemented multi-step user profiles, subscription management, offline payments, and role-based admin controls.
- Built an admin console for clients, payments, coupons, and analytics with advanced filtering and pagination; designed reusable, responsive UI components for consistency and maintainability.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks & Libraries: React.js, Next.js, Redux Toolkit, React Query (TanStack Query), Context API, React Hook Form, Node.js, Express.js

Styling & UI: Tailwind CSS, Bootstrap, CSS Flexbox/Grid, Responsive & Mobile-First Design

Concepts: Component Architecture, Micro Frontends, SSR/SSG, Code Splitting, Lazy Loading, Memoization, Virtual DOM Optimization, REST API Integration, RBAC, JWT Auth, WebRTC, WebSockets, OCR Integration

Testing & Tools: Jest (Unit Testing), Git, GitHub, Jira, Postman, Figma, Adobe XD, NPM/Yarn

Practices: Agile/Scrum, Code Reviews, WCAG Accessibility, Cross-Browser Compatibility, Performance Optimization

EDUCATION

L.V.H. College
Bachelor of Science

Jan 2023
Nashik, Maharashtra
